Subject: SCE&G electric rate increase request

RECEIVED
3/1/11 too

to the South Carolina Public Service Commission:

I oppose SCE&G's request for a rate hike for residential customers beginning in May for "fuel costs". Before any rate hikes, SCE&G must become an efficient operation, lower their management costs and manage their resources better as opposed to always expecting the public to foot the bill. The increases already allowed are appalling, and the gouging of the public is unjustified, yet the PSC permits it.

As long as SCE&G avoids being a green operation it remains a road block, preventing many residents from reaching better energy solutions while working hard just to pay to keep warm or cool.
